Newark, DE, 19711

Professional Summary

I'm a software engineer who delivers production-grade applications end-to-end and provides technical leadership across the software development lifecycle. Skilled at translating ambiguous business needs into reliable, maintainable systems. I've worked in large-scale environments, collaborating cross-functionally with product, QA, and operations to align on requirements, manage risk, and ship in increments. I'm known for strong ownership, clear communication, and disciplined engineering practices (testing, CI/CD, monitoring). My work consistently improves cycle time, reduces manual effort and errors, and increases system reliability.

EDUCATION

JKU

JOHANNES KEPLER UNIVERSITÄT
GRADUATE COURSEWORK,
COMPUTER SCIENCE (M.S. PROGRAM)
Sept. 2016 - Nov. 2017 | Austria, Linz

GUC

GERMAN UNIVERSITY IN CAIRO
BS IN COMPUTER SCIENCE
Oct. 2011 - July 2016 | Egypt, Cairo

SKILLS

PROGRAMMING

- **Languages:** Java, C#, Python, Ruby, JavaScript, SQL, PHP, C/C++, Swift
- **Backend / Frameworks:** Spring, Ruby on Rails, Laravel
- **Frontend:** React, Angular, HTML, CSS
- **Testing / Automation:** Selenium, Cucumber, JUnit, Mockito, TestNG
- **DevOps / Tools:** Git, Jenkins, Maven
- **Cloud:** AWS
- **Other:** $\LaTeX$, Android

CERTIFICATIONS

2024 AWS Certified Cloud Practitioner

AWARDS

2014 34th/1725 **IEEE Xtreme**
2012 20th/75 **ACM-ECPC**

EXPERIENCE

JPMORGAN CHASE | SOFTWARE ENGINEER III

October 2021 - April 2026

- Led the end-to-end delivery of production features and system enhancements, coordinating requirements, acceptance criteria, implementation, testing, and release activities with product, QA, operations, and engineering stakeholders.
- Built a regression automation suite for production releases, eliminating substantial manual verification, saving hundreds of hours, and increasing deployment confidence.
- Implemented and drove adoption of test-driven development, integrating automated tests into CI pipelines to provide fast feedback, enforce consistent quality gates, and reduce regressions.
- Optimized backend processing and database interactions to reduce request-processing time and improve responsiveness for business users.
- Rotated as sprint and meeting lead, facilitating Agile ceremonies, tracking commitments and blockers, and coordinating follow-up actions to support on-time delivery.
- Mentored interns and onboarded new team members through technical guidance, documentation, knowledge-sharing sessions, and code-review support.
- Proactively upgraded dependencies to remediate security vulnerabilities and keep services aligned with internal standards.

AMAZON | SDE

April 2020 - April 2021

- Contributed to a continuous delivery workflow by implementing automated test gates and deployment validations as part of the release pipeline.
- Integrated automated testing into pre-release environments (e.g., beta/gamma) using serverless and internal testing tooling to improve deployment confidence and reduce regressions.
- Supported service deployment and operation on AWS compute to handle HTTP/HTTPS traffic, including environment configuration and rollout readiness.
- Built and scheduled one-time and recurring serverless tasks to offload operational work, improving reliability and reducing manual effort.

COURSEWORK

UNDERGRADUATE₂₀₁₁₋₂₀₁₅

Data Structures and Algorithms

Computer programming lab (Game, Object-Oriented)

Concepts of Programming Languages

Theory of Computation

Discrete Math

Databases

Computer System Architecture

Software Engineering

Operating Systems

Embedded Systems

Microprocessors

Analysis and Design of Algorithms

Computer Graphics

GRADUATE

GUC₂₀₁₅₋₂₀₁₆

Artificial Intelligence

Computer Vision

Constraint Programming

Neural Networks

Compiler

Computer and Network Security

Advanced Web Development

Knowledge Representation and Reasoning

JKU₂₀₁₆₋₂₀₁₇

Information Retrieval and Extraction

Design and Analysis of Algorithms

Artificial Intelligence

Informationssysteme

REVATURE_{BOOTCAMP}

Java

SQL, Maven, JDBC

HTML/CSS/JavaScript

Spring, Hibernate, Angular 4

Junit, TestNG, Selenium, Cucumber

Git, AWS, Jenkins

TRACKFORCE_{Project Continuum}

FREDDIE MAC | SDET

November 2018 - April 2020

- Developed and maintained an automated end-to-end test suite using Selenium and Cucumber, improving regression coverage and reducing manual QA effort.
- Built reliable front-end/UI test flows with stable selectors and reusable page components to improve test consistency and maintainability.
- Authored readable BDD scenarios in Cucumber to make acceptance criteria and test intent accessible to non-technical stakeholders and cross-functional partners.
- Implemented database validation checks to confirm persisted values matched expected outcomes from user front-end inputs, improving data integrity and catching defects earlier.
- Partnered with QA and engineering to translate requirements into BDD scenarios and automated checks, improving clarity and reducing rework during release cycles.

VORAUERFRIENDS | WEB DEVELOPER

June 2017 - November 2017

- PHP Back-end Development
- WordPress PHP manual modifications
- Front-end Development

MICROSOFT | SDE INTERN

July 2015 - September 2015

Building an Arabic local Business Taxonomy Classifier for Bing queries that would lead to a better relevance experience for Bing users. Tasks are:

- Extract training/testing data(queries) from Bing logs.
- Build Naïve Bayes Classifier using manually labeled data.
- Create a logistic regression classifier using manually labeled data.
- Increase the training data by adopting some auto-labelling techniques.
- Implement a document classifier for Bing index URLs to use it for auto-labelling the queries' clicked URLs and thus the queries.

MICROSOFT | SDE INTERN

January 2014 - February 2014

Sending a webpage to the server to be processed for Acronyms, Named Entities, etc. Tasks are:

- Inject JavaScript code in a web page, then parse the web page contents and divide the contents into requests.
- Send each request to the web server, which waits to collect all requests from the same user, then processes the requests as one request, and then sends them back to the client.

GERMAN UNIVERSITY IN CAIRO | TEACHING ASSISTANT

October 2012 - May 2016

- Teaching the programming Language "Java" in Introduction to Computer Programming (CSEN 102).
- Teaching Data Structure and Algorithms (CSEN 301).
- Teaching Prolog, Haskell, and C++ in the Course of Concepts of Programming Languages (CSEN 403).
- Teaching Advanced Programming Lab (aka. Game Course, Object-oriented Course) (CSEN 401).
- Teaching Databases I (CSEN 501).

PROJECTS

WORDLE SOLVER | SWIFT, PYTHON

- An iPhone/iPad App to help solve Wordle, the game
- Provides data-driven Wordle solving recommendations that minimize the number of guesses on average, with optional worst-case protection for tricky boards.
- Instantly narrows the solution space after each round and surfaces the most informative next guesses, including whether a suggestion is a valid remaining answer.
- Offers multiple strategy modes (balanced, fastest-average, safest-worst-case) plus an optional hard-mode constraint to match different play styles.

NERDLE SOLVER | JAVA

- A Java program to help solve Nerdle, the game

TRACKFORCE | WEB APP, GIT, JENKINS, HIBERNATE, REST, AWS, MAVEN, SELENIUM, CUCUMBER, TESTNG, AJAX, ANGULAR 4

The TrackForce system allows a manager to track the life cycle of associates as they move through stages, such as training, reserved, selected, confirmed, deployed, and others. The metrics for mapped and unmapped resources provide a preview of the associates available for client mapping, enabling the management team to plan for future goals. The focus of future batches and the historical data on associates trained at any point in time provide clear insight into meeting our client needs.

- Managed Jenkins server to ensure continuous integration via a remote pipeline.
- Collaborated and managed source code using Git.
- Used TestNG, Mockito, and PowerMock to test the functional behavior of the server-side of the application.
- Managed to convert the remaining JUnit test into TestNG.
- Worked on fixing the application and test issues that are making the tests fail.
- Developed test plan and test cases for testing.
- Tracked all tests and their results for software testing documentation.
- Constructed some modifications to the security of the system.
- Fixed the user being able to change his role by modifying the cookies, empowering JWT.

ROBUSTA STUDIO SUPPORT TEAM | WEB APP, PHP LARAVEL

This software is a customer support system. This system is designed to be used to monitor the clients social pages (Twitter) to provide better support for the customers posting there. This system enables the customers to open support tickets that should be answered by the clients representative.

- Fetch customer's tweets and open tickets for them in the appropriate department.
- Reply to customers' tweets from the system.
- Prioritize tickets.

BINARY SKILL | WEB APP, RUBY ON RAILS

- Created a system that compiles, executes, and debugs Java and Python codes **Online**.
- Worked on founding a startup based on this project during the summer of 2014.

SNEPS JAVA 2.0 | BACHELOR PROJECT

- SNePS is a knowledge representation system built in the 1970s.
- My job was to re-implement, enhance, and optimize parts of the system in Java using modern design patterns and approaches.

JS CONSOLE | JAVASCRIPT LIBRARY

- A JavaScript Library used to simulate a Unix Terminal on the Browser.

JS TIMER | JAVASCRIPT LIBRARY

- A JavaScript Library used to perform a certain functionality every certain number of milliseconds.
