PROFESSIONAL SUMMARY

I'm a software engineer who delivers production-grade applications end-to-end and provides technical leadership across the software development lifecycle. Skilled at translating ambiguous business needs into reliable, maintainable systems. I've worked in large-scale environments, collaborating cross-functionally with product, QA, and operations to align on requirements, manage risk, and ship in increments. I'm known for strong ownership, clear communication, and disciplined engineering practices (testing, CI/CD, monitoring). My work consistently improves cycle time, reduces manual effort and errors, and increases system reliability.

EDUCATION

JKU
Johannes Kepler Universität
Graduate Coursework, Computer Science (M.S. program)
Sept. 2016 - Nov. 2017 | Austria, Linz

GUC
German University in Cairo
BS in Computer Science
Oct. 2011 - July 2016 | Egypt, Cairo

LINKS

Portfolio: mussabeldash.github.io/Portfolio
GitHub: github.com/MussabElDash
LinkedIn: linkedin.com/in/MussabEldash

SKILLS

- **Languages:** Java, C#, TypeScript, Python, Ruby, JavaScript, SQL, PHP, C/C++, Swift
- **Backend / Frameworks:** Spring, Ruby on Rails, Laravel
- **Frontend:** React, Angular, HTML, CSS
- **Testing / Automation:** Selenium, Cucumber, JUnit, Mockito, TestNG
- **DevOps / Tools:** Git, Jenkins, GitHub Actions, Maven
- **Cloud:** AWS, Lambda, API Gateway, Bedrock

CERTIFICATIONS

AWS Certified Cloud Practitioner
2024

AWARDS

2014	34th/1725	**IEEE Xtreme**
2012	20th/75	**ACM-ECPC**

EXPERIENCE

JPMORGAN CHASE | Software Engineer III
October 2021 - April 2026

- Led the end-to-end delivery of production features and system enhancements, coordinating requirements, acceptance criteria, implementation, testing, and release activities with product, QA, operations, and engineering stakeholders.
- Built a regression automation suite for production releases, reducing manual verification and increasing deployment confidence.
- Implemented and drove adoption of test-driven development, integrating automated tests into CI pipelines to provide fast feedback, enforce consistent quality gates, and reduce regressions.
- Optimized backend processing and database interactions to reduce request-processing time and improve responsiveness for business users.
- Rotated as sprint and meeting lead, facilitating Agile ceremonies, tracking commitments and blockers, and coordinating follow-up actions to support on-time delivery.
- Mentored interns and onboarded new team members through technical guidance, documentation, knowledge-sharing sessions, and code-review support.
- Proactively upgraded dependencies to remediate security vulnerabilities and keep services aligned with internal standards.

AMAZON | Software Development Engineer (SDE)
April 2020 - April 2021

- Contributed to a continuous delivery workflow by implementing automated test gates and deployment validations as part of the release pipeline.
- Integrated automated testing into pre-release environments (e.g., beta/gamma) using serverless and internal testing tooling to improve deployment confidence and reduce regressions.
- Supported service deployment and operation on AWS compute to handle HTTP/HTTPS traffic, including environment configuration and rollout readiness.
- Built and scheduled one-time and recurring serverless tasks to offload operational work, improving reliability and reducing manual effort.

COURSEWORK

UNDERGRADUATE

2011 - 2015

Data Structures and Algorithms
Computer programming lab (Game, Object-Oriented)
Concepts of Programming Languages
Theory of Computation
Discrete Math
Databases
Computer System Architecture
Software Engineering
Operating Systems
Embedded Systems
Microprocessors
Analysis and Design of Algorithms
Computer Graphics

GRADUATE

GUC (2015-2016)

Artificial Intelligence
Computer Vision
Constraint Programming
Neural Networks
Compiler
Computer and Network Security
Advanced Web Development
Knowledge Representation and Reasoning

JKU (2016-2017)

Information Retrieval and Extraction
Design and Analysis of Algorithms
Artificial Intelligence
Informationssysteme

REVATURE (BOOTCAMP)

Java
SQL, Maven, JDBC
HTML/CSS/JavaScript
Spring, Hibernate, Angular 4
JUnit, TestNG, Selenium, Cucumber
Git, AWS, Jenkins
TRACKFORCE (Project Continuum)

EXPERIENCE CONTINUED

FREDDIE MAC | Software Development Engineer in Test (SDET)

November 2018 - April 2020

- Developed and maintained Selenium and Cucumber end-to-end automation, improving regression coverage and reducing manual QA effort.
- Built stable UI test flows with reusable page components and selectors to improve consistency and maintainability.
- Authored readable behavior-driven development (BDD) scenarios that made acceptance criteria and test intent accessible to non-technical stakeholders.
- Implemented database validation checks to confirm persisted values matched user inputs and catch data integrity defects.
- Partnered with QA and engineering to translate requirements into automated checks and reduce rework during releases.

VORAUERFRIENDS | Web Developer

June 2017 - November 2017

- Developed PHP backend and frontend functionality and customized WordPress code.

MICROSOFT | Software Development Engineer Intern

July 2015 - September 2015

Arabic local-business taxonomy classification for Bing queries.

- Extracted training and testing queries from Bing logs and built Naïve Bayes and logistic regression classifiers using manually labeled data.
- Expanded training data through auto-labeling techniques.
- Implemented a document classifier for Bing index URLs to support auto-labeling of clicked URLs and their associated queries.

MICROSOFT | Software Development Engineer Intern

January 2014 - February 2014

Web-content processing for acronyms and named entities.

- Injected JavaScript to parse webpage content and divide it into requests for server-side processing.
- Implemented client-server request handling to collect related requests, process webpage content, and return results to the client.

GERMAN UNIVERSITY IN CAIRO | Teaching Assistant

October 2012 - May 2016

- Taught Java in Introduction to Computer Programming and supported data structures and algorithms instruction.
- Taught Prolog, Haskell, and C++ in Concepts of Programming Languages, along with object-oriented programming and game development labs.
- Taught Databases I.

PROJECTS

AI PORTFOLIO PLATFORM | React, TypeScript, Amazon Bedrock, AWS Lambda

- Built a React/TypeScript portfolio with an AI guide and résumé drafting backed by Amazon Bedrock, AWS Lambda, and API Gateway.
- Defined serverless infrastructure with AWS SAM/CloudFormation and configured GitHub Actions to lint, test, build, and publish the static site to GitHub Pages.

WORDLE SOLVER | Swift, Python

- Developed an iPhone/iPad app that narrows possible answers after each round and recommends informative guesses, indicating which suggestions remain valid answers.
- Implemented balanced, fastest-average, and safest-worst-case strategies, with an optional hard-mode constraint.

TRACKFORCE | Java, Angular, AWS, Jenkins, TestNG, Mockito, PowerMock, JWT

Associate lifecycle tracking web application supporting staffing and resource planning.

- Managed Jenkins continuous integration and server-side testing with TestNG, Mockito, and PowerMock; migrated remaining JUnit tests to TestNG.
- Developed test plans and cases, tracked results, and resolved application and test failures.
- Fixed a role-escalation vulnerability that allowed users to modify roles through cookies, using JSON Web Tokens (JWT).

SNEPS JAVA 2.0 | Java, Bachelor Project

- Re-implemented, enhanced, and optimized parts of a knowledge representation system in Java using modern design patterns.

ROBUSTA STUDIO SUPPORT | PHP, Laravel

- Developed a social customer-support system that fetched customer tweets, opened and prioritized departmental tickets, and supported replies from the system.

BINARY SKILL | Ruby on Rails

- Created a web system for compiling, executing, and debugging Java and Python code online; explored founding a startup around the project in summer 2014.

NERDLE SOLVER | Java

- Built a Java program to help solve Nerdle equation puzzles.
